

OUR SERVICES

- » Mechanical construction
- » High-purity piping
- » Process and utility piping
- » Process equipment setting
- » HVAC systems
- » Plumbing
- » Sheet metal ductwork
- » Controls and instrumentation
- » Equipment procurement and installation
- » Fabrication
- » Alloy metals
- » Carbon steel piping
- » Stainless steel piping
- » Specialty piping
- » Integrated mechanical
- » Equipment skids
- » Specialty process fabrication
- » Stainless and galvanized ductwork

CERTIFICATIONS

- » ASME Code Stamp Certificates "U" & "PP"
- » National Board Inspection Code "R" stamp
- » ASME NQA-1 Nuclear Quality Program

Complete Semiconductor Systems Support

Intermech provides full mechanical services for semiconductor clients throughout the Pacific Northwest and Mountain West. Our experienced management staff and highly trained craftsmen oversee a wide range of large, complex, fast-track projects for these demanding applications, including fabrication and installation of hygienic piping, process piping, HVAC, and plumbing.

Protecting Your Facility Investment

Our high-level technical expertise and advanced capabilities will meet your most intricate and demanding requirements. Intermech offers complete semiconductor systems expertise, including:

- » Ultra-high purity process piping distribution systems for specialty gases
- » Bulk gas systems
- » Double contained acid waste systems
- » Hydrofluoric acid waste systems
- » Chemical distribution systems

Thorough Systems and Expert Service

For years, Intermech has made a point of developing and implementing sophisticated assurance programs for our installations. From our work in the nuclear industry to our services in semiconductor systems, we've developed and followed thorough standard operating procedures to help ensure the work we do is up to the industry's stringent standards.

These procedures and guidelines continue to insure that Intermech and its subcontractors are in conformance with contract specifications and in compliance with the requirements of the Current Good Manufacturing Practice, resulting in a quality installation and an accurate enhanced turn-over package.
